COMMUTER RAIL

Agencies' Estimates of Operations and Maintenance Costs for Positive Train Control

GAO Highlights

Highlights of GAO-24-106329, a report to congressional committees

Why GAO Did This Study

Across the country, commuter rail brings people to work, school, medical appointments, and recreational activities. Commuter railroads are among the railroads required to implement PTC.

The Infrastructure Investment and Jobs Act includes a provision for GAO to examine commuter rail PTC O&M costs. This report describes (1) the challenges commuter rail agencies reported facing in determining their annual PTC O&M costs for fiscal years 2020–2025, and the extent to which they were able to estimate these costs; and (2) what commuter rail agencies estimated as their PTC O&M costs.

To obtain information on commuter rail agencies' PTC O&M costs, GAO surveyed all 29 public commuter rail agencies required to implement PTC, and 26 responded. Survey questions related to the challenges agencies face trying to estimate PTC costs as well as questions about agencies' existing PTC cost estimates. GAO checked survey responses for reporting errors and conducted follow-up with commuter rail agencies based on their survey responses. GAO developed descriptive statistics for the ranges of costs and compared the costs to the size of the agency and to its total O&M costs.

View GAO-24-106329. For more information, contact Elizabeth Repko at (202) 512-2834 or repkoe@gao.gov.

COMMUTER RAIL

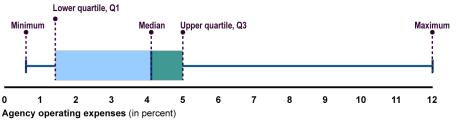

Agencies' Estimates of Operations and Maintenance Costs for Positive Train Control

What GAO Found

Commuter railroads incur costs to implement and operate positive train control (PTC)—a system which can prevent collisions and other types of accidents. However, they are not required to report those costs separately from other operations and maintenance (O&M) costs. Most of the 26 commuter rail agencies that responded to GAO's survey reported that it was challenging to identify prior years' PTC O&M costs, because they are integrated into other O&M costs. Agencies reported that isolating PTC O&M costs is complicated, because (1) PTC technology is overlaid on existing systems and (2) employees' PTC O&Mrelated tasks are not tracked separately from other tasks, among other reasons. For example, 25 of the 26 commuter rail agencies reported their PTC systems were overlaid on other systems; 12 of these also reported that this made it extremely or very challenging to estimate PTC-specific O&M costs. Moreover, some commuter rail agencies said it can be challenging to project their future PTC O&M costs due to uncertainties such as the timing—and therefore cost—of certain software or hardware upgrades. Despite these challenges, 17 of the 26 agencies were able to provide GAO complete estimates or projections for fiscal years 2022 through 2025 by, for example, reviewing invoices for materials or discussing costs with their Information Technology specialists.

Of the 17 agencies that provided complete estimates, a majority spent 5 percent or less of their total operating costs on PTC O&M in fiscal year 2022. These 17 estimates ranged from less than 1 percent to 12 percent, with a median of about 4 percent (see fig.). In addition, the majority (15 of 17) projected that their PTC O&M costs would increase between fiscal years 2023 and 2025.

Distribution of Estimated Commuter Rail Positive Train Control Operations and Maintenance Costs as Percentage of Total Operating Costs for Fiscal Year 2022

Source: GAO analysis of Federal Transit Administration and survey data. | GAO-24-106329

To understand the relationship between PTC O&M costs and agency size, GAO analyzed ridership and route miles in PTC operation and found that these factors were moderately to strongly associated with fiscal year 2022 PTC O&M costs. Specifically, commuter rail agencies with higher ridership or more route miles in PTC operation tended to have higher PTC O&M costs. However, GAO cannot make conclusions about whether these factors influenced PTC O&M costs, because this study did not control for other factors such as PTC type.

U.S. GOVERNMENT ACCOUNTABILITY OFFICE

441 G St. N.W. Washington, DC 20548

January 10, 2024

The Honorable Maria Cantwell Chair The Honorable Ted Cruz Ranking Member Committee on Commerce, Science, and Transportation United States Senate

The Honorable Sam Graves Chair The Honorable Rick Larsen Ranking Member Committee on Transportation and Infrastructure House of Representatives

Commuter rail passengers across the country take hundreds of millions of trips each year traveling to work, school, medical appointments, and recreational activities. Positive train control (PTC) technology—a system designed to help control train movements, including braking—improves the safety of commuter rail by preventing train-to-train collisions and other types of accidents. For example, according to the National Transportation Safety Board, PTC could have prevented 22 rail accidents that occurred between 2008—when the statute requiring commuter and certain other railroads to implement PTC was first enacted—and 2018, the deadline for railroads to implement PTC systems or otherwise qualify for an extension by law.¹

During the COVID-19 pandemic, fewer passengers used commuter rail, which led to commuter railroads losing revenue from passenger fares. In addition, as we have previously reported, the COVID-19 pandemic resulted in shifts in commuting patterns that may affect commuter rail funding in the future, even after the immediate effects of the pandemic are over.² This has made some commuter railroad officials concerned about the ability to fund the ongoing operations and maintenance (O&M) of PTC for commuter railroads.

¹National Transportation Safety Board, *The State of Positive Train Control Implementation in the United States* (Washington, D.C.: Sept. 13, 2018).

²GAO, Commuter Rail: Information on Benefits and Funding Challenges for Service in Less Urbanized Communities, GAO-21.355R, (Washington, D.C.: April 1, 2021).

The Infrastructure Investment and Jobs Act includes a provision for us to determine the annual PTC system O&M costs for commuter rail agencies.³ This report examines (1) challenges, if any, that commuter rail agencies reported facing in determining their annual PTC O&M costs from fiscal year 2020 through fiscal year 2025, and the extent to which they were able to estimate these costs, and (2) the annual PTC O&M costs from fiscal year 2020 through fiscal year 2025 estimated by commuter rail agencies.

For both objectives, we surveyed all 29 public commuter rail agencies required to implement PTC, and received 26 responses.⁴ Survey questions asked commuter rail agencies to explain the types of PTC O&M costs they incur, estimates of those costs, and any challenges with estimating them.⁵

To develop the survey questions, we (1) held a discussion group with eight selected commuter rail agencies to discuss their recommended cost categories and estimation methods, and (2) pre-tested the survey with five commuter rail agencies. We selected the commuter rail agencies for the discussion group and pre-tests to represent a variety of ridership levels and PTC systems. We included commuter rail agencies that perform PTC maintenance tasks themselves and those that contract out their PTC maintenance tasks to a service provider. We conducted the web-based survey from May 10 through June 21, 2023. Our survey collected PTC O&M cost information for five cost categories: (1) materials and supplies, (2) contracts and agreements, (3) in-house labor, (4) utilities, and (5) miscellaneous.⁶ We reviewed the 26 completed surveys to check for errors and conducted follow-up with respondents to increase the quality of the survey data. We received full-year, complete estimates from 15 agencies for fiscal year 2020, 14 agencies for fiscal year 2021,

⁵We define commuter rail agencies as public agencies with passenger rail service between an urban area and the surrounding suburban communities. Intercity passenger rail such as Amtrak and Brightline are excluded from this review as they are operated as for-profit companies, rather than as public authorities. The WeGo Star, previously the Music City Star, a commuter rail service running between Nashville and Lebanon, Tennessee, is also excluded because it was exempted from the requirement to install PTC.

⁶See appendix I for a description of each of these categories.

³Pub. L. No. 117-58, § 22409, 135 Stat. 429, 740 (2021).

⁴In 2008, a federal law was enacted requiring certain railroads—including those providing commuter service—to implement PTC to prevent train-to-train collisions and other types of accidents: The Rail Safety Improvement Act of 2008, Pub. L. No. 110-432, § 104(a), 122 Stat. 4848, 4856-57 (2008) (codified as amended at 49 U.S.C. § 20157).

	and total operating costs.
	For both objectives, we interviewed (1) Department of Transportation (DOT) officials; (2) five commuter rail agencies (which did not participate in the discussion group) selected to obtain a range of geographic location, agency size, and PTC system type used; and (3) other stakeholders such as the American Public Transportation Association and the Commuter Rail Coalition.
	To obtain background information on commuter rail and PTC, we reviewed our previous reports. We also reviewed applicable statutes and regulations to identify O&M funding available for PTC, any data collection and reporting requirements related to PTC, and the Federal Railroad Administration's (FRA) and the Federal Transit Administration's (FTA) roles in collecting data and reporting PTC costs. For more information on our scope, objectives, and methodology, please see appendix I.
	We conducted this performance audit from October 2022 to January 2024 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.
Background	
Commuter Railroads	Passenger rail systems—including commuter rail—tend to have relatively high capital and operating costs. This is because
	 they require a substantial amount of capital (e.g., infrastructure and equipment) such as tracks, bridges, passenger stations, and rail cars; and
	 they have costs related to the personnel that operate and maintain this infrastructure and equipment, according to DOT officials.
	In addition, most commuter rail agencies operate some or all of their trains as "tenants" on the track of another railroad—such as Amtrak or a

and 17 agencies for fiscal years 2022-2025. We also determined that data from 17 of the commuter rail agencies were sufficiently reliable for the purposes of reporting these agencies' PTC O&M costs in fiscal year 2022-2025. We developed descriptive statistics for the 17 estimates of PTC O&M costs agencies provided for fiscal year 2022 and compared these costs to each agency's size (e.g., total ridership and route miles)

	freight railroad—known as the "host." The tenant may pay the host fees to access, dispatch, and maintain the track infrastructure.
	Commuter rail agencies' capital costs are funded through a mix of federal and state funds; federal funds supplied about 37 percent of capital costs in fiscal year 2019, on average. ⁷ Operating costs are largely funded through a mix of state and local funding as well as from passenger fares. For example, in fiscal year 2019, state and local sources and fares riders paid accounted for 90 percent of commuter rail agencies' operating funding on average, while federal funds accounted for 10 percent on average. ⁸
Positive Train Control	PTC is a technology designed to prevent train-to-train collisions, over- speed derailments, incursions into established work zones, and the movement of a train through a switch left in the wrong position. ⁹ For example, PTC is designed to automatically slow or stop a train in certain cases. PTC is generally implemented as an overlay to existing signal and train control systems. In 2008, a federal law was enacted requiring railroads—including 29 commuter rail agencies—to implement PTC to prevent train-to-train collisions and other types of accidents. ¹⁰ By December 2020, all 29 commuter rail agencies had fully implemented PTC.

⁹49 U.S.C. § 20157(i)(5).

⁷According to the National Transit Database (NTD), data for commuter rail agency funding sources in 2019 and 2021.

⁸We used fiscal year 2019 to show the funding sources for the last year of normal data before the COVID-19 pandemic. During fiscal year 2021, on average, commuter rail agencies' funding sources for operating expenses were 62 percent state and local and 38 percent federal due to the Coronavirus Aid, Relief, and Economic Security (CARES) Act, Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (CRRSAA), and American Rescue Plan Act appropriating funds for operating expenses through certain FTA programs.

¹⁰Rail Safety Improvement Act of 2008, Pub. L. No. 110-432, § 104(a), 122 Stat. 4848, 4856-57 (2008) (codified as amended at 49 U.S.C. § 20157). In 2015, Congress extended the original deadline of December 31, 2015, to December 31, 2018, and allowed railroads to apply for an extension of up to 24 months if they met certain requirements. Positive Train Control Enforcement and Implementation Act of 2015, Pub. L. No. 114-73, § 1302, 129 Stat. 576, 576-77 (2015).

We previously reported that PTC implementation was a complex and lengthy process.¹¹ It requires the integration of multiple components, including communication systems; hardware on locomotives and the track; and software in centralized office locations, onboard the train, and along the track. To implement PTC, railroads designed, produced, and installed more than 20 major components that enable them to (1) communicate trains' locations, movements, speed, and, when necessary, (2) slow or stop a train that is not being operated safely or is facing certain other risks. Many of these components were new technologies designed and developed specifically for PTC, and railroads had to integrate them with their existing systems.

The railroads—including commuter rail agencies—have primarily implemented one of three PTC systems to meet the federal law: (1) Interoperable Electronic Train Management System (I-ETMS), (2) Advanced Civil Speed Enforcement System II (ACSES II), or (3) Enhanced Automatic Train Control (E-ATC). Each of these systems uses different technologies and interacts with existing signaling technology differently. Nonetheless, all three are capable of delivering functionality that meets FRA's PTC requirements.¹² The intended safety benefits of PTC can only be achieved when all required hardware and software has been installed; a railroad has verified and validated that the PTC system operates as designed, including ensuring the PTC system is interoperable; and a railroad has obtained PTC system certification from FRA.¹³ Once all of these steps have been implemented, a PTC system allows a railroad to communicate timely information on changing track conditions, such as temporary speed restrictions where railroad employees are conducting track maintenance. Absent this

¹²For example, to determine a train's location, ACSES II and E-ATC rely on equipment embedded on the track, while I-ETMS uses Global Positioning System information. ACSES II and E-ATC both supplement existing train control systems to provide all required PTC functionality, while I-ETMS was designed as a new system to provide this functionality.

¹³The Rail Safety and Improvement Act of 2008 and FRA's implementing regulations also require PTC systems to be interoperable, meaning that the locomotives of host and tenant railroads operating on the same main line must communicate with and respond to the PTC system, including during uninterrupted movements over property boundaries.

¹¹GAO, Positive Train Control: Many Commuter Railroads Still Have Significant Additional Implementation Work and Opportunities Exist to Provide Federal Assistance, GAO-18-367T, (Washington, D.C.: March 1, 2018);GAO, Positive Train Control: Additional Oversight Needed As Most Railroads Do Not Expect to Meet 2015 Implementation Deadline, GAO-15-739 (Washington, D.C.: Sept. 4, 2015), and GAO, Positive Train Control: Additional Authorities Could Benefit Implementation, GAO-13-720 (Washington D.C.: Aug. 16, 2013).

communication, a train might proceed at normal speeds through this area and cause an accident.

Each of the three PTC systems requires individuals to operate and maintain them. Specifically, each PTC technology includes a multitude of tasks for train operators and other employees that vary depending on the PTC technology type used. For example, IT specialists are sometimes required to install software updates on PTC systems (see figure 1).

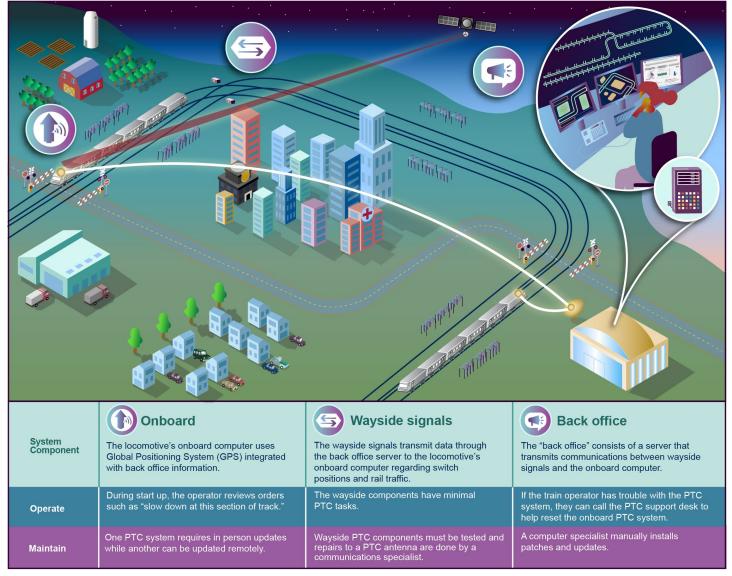

Figure 1: Basic Operation of Positive Train Control and Its Operations and Maintenance Tasks

Federal Roles and Responsibilities

FTA and FRA respectively support and oversee commuter rail agencies' use of PTC. The FTA provides financial assistance to public transit systems, including commuter rail agencies. FRA has responsibility for overseeing railroads' PTC implementation and ongoing compliance with PTC regulations.

Federal Transit Administration. FTA has funding programs that commuter rail agencies can use for PTC-related capital costs, which include Urbanized Area Formula Grants, Formula Grants for Rural Areas, and the State of Good Repair Formula Program.¹⁴ These programs primarily reimburse capital expenses and generally require commuter rail agencies to provide a 20 percent match from other sources.¹⁵ Following the decline in commuter rail ridership during the COVID-19 pandemic, a series of new laws provided temporary funds with a 100 percent federal share that commuter rail agencies, regardless of size, could use for operating expenses to maintain service, which could include PTC operating expenses. Specifically, the CARES Act, CRRSAA, and American Rescue Plan Act appropriated approximately \$25 billion, \$14 billion, and \$30.5 billion, respectively, to FTA to support the transit industry through FTA programs, including the Urbanized Area and Rural Area formula programs.¹⁶

Because all aspects of transit operations were affected by the COVID-19 pandemic and the consequent loss of revenue, the CARES Act, CRRSAA, and American Rescue Plan Act permitted recipients of federal transit funding—including commuter rail agencies—to use the funding for a wide array of expenses with no limit on the amount used for operating expenses.¹⁷ Some of the COVID-19 funding required that it be used for payroll and operating expenses to the maximum extent possible. However, if the recipient certified to FTA that the recipient had not

¹⁶CARES Act, Pub. L. No. 116-136, 134 Stat. 281, 599-600 (2020); CRRSAA, Pub. L. No. 116-260, 134 Stat. 1909, 1945-47 (2020); American Rescue Plan Act, Pub. L. No. 117-2, 135 Stat. 4, 72-73 (2021).

¹⁷These flexibilities are exceptions to the usual requirements of FTA's Urbanized Area and Rural Area formula programs. Additional exceptions are that funds provided pursuant to the CARES Act, CRRSAA, and American Rescue Plan Act have no requirement for local matching funds and operating expenses are not required to be included in a transportation improvement program, a long-range transportation or statewide transportation plan, or a statewide transportation improvement program. All other program requirements apply to funds provided by these Acts.

¹⁴In addition, the Department of Transportation (DOT) has other grant programs that may be available for commuter rail agencies' certain other capital expenses, such as the Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Grant Program, which provides for capital investments in surface transportation infrastructure.

¹⁵In addition, transit systems in small urbanized and rural areas, as well as some transit systems in large urbanized areas, may use eligible formula funds for certain operating expenses with a 50 percent match from other sources. See: 49 U.S.C. § 5307(a)(1)(D)-(a)(2)(A), (d)(2); 49 U.S.C. § 5311(b)(1)(C), (g)(2)(B).

furloughed any employees, then the recipient was not required to prioritize payroll and operating expenses before other expenses.

FTA also administers the National Transit Database (NTD), which is intended to provide information to the federal government and others on which to base public transportation service planning. All recipients and direct beneficiaries of grants from the Urbanized Area formula program and Rural Area formula program are required by statute to submit data to the NTD, such as operating expenses, ridership levels, and funding sources.¹⁸ While agencies submit information of their total operations and maintenance expenses to NTD, they do not specifically identify their PTC O&M costs as part of this reporting, because there are no federal requirements for reporting of PTC O&M costs. As part of its annual data validation process, FTA evaluates agency-submitted data in the NTD and looks for outliers.

Federal Railroad Administration. FRA is responsible for overseeing railroads' PTC implementation, providing technical assistance, and issuing regulations.¹⁹ FRA reviews and approves railroads' required PTC system documentation, including test and safety plans, and certifies PTC systems, and has the authority to impose civil penalties when a railroad fails to meet certain PTC requirements.²⁰ FRA also oversees railroads' ongoing compliance with PTC regulations by auditing railroads' operation of their PTC systems and reviewing failure-related notifications and quarterly reports of PTC system performance. FRA generally does not provide funding for commuter rail passenger transportation to cover the

¹⁸49 U.S.C. § 5335(b). We recently examined commuter rail agencies' O&M costs using NTD Data. See GAO, *Commuter Rail: Information on Benefits and Funding Challenges for Service in Less Urbanized Communities*, GAO-21-355R, (Washington, D.C., Apr. 1, 2021).

¹⁹⁴⁹ U.S.C. § 20157.

²⁰49 U.S.C. § 20157.

costs of operating and maintaining PTC; however, it does offer funding to cover some capital costs.²¹

Commuter Rail Agency Officials Reported Challenges Determining PTC O&M Costs, but Many Were Able to Provide Estimates	
Most Commuter Rail Agency Officials Cited Separating PTC Costs from Other Costs as a Challenge	Most commuter rail agencies said that it was challenging to determine prior years' PTC O&M costs because PTC O&M costs are integrated into other O&M costs. Agencies reported three key reasons that isolating PTC O&M costs can be complicated: 1) PTC technology is overlaid on existing systems, 2) host and tenant agreements and contracts may not break out specific PTC costs, and 3) employees' PTC O&M-related tasks are not tracked separately from other tasks.
	PTC Overlay System Design. Twenty-five of the 26 commuter rail agencies that responded to our survey said that their PTC technology is overlaid onto existing track signaling systems. ²² Most of these agencies said that this can make distinguishing PTC costs from overall signaling costs challenging. Specifically, about half of these commuter rail agencies (12 of the 25 with overlaid PTC systems) reported that this made it extremely or very challenging to estimate PTC-specific O&M costs for fiscal years 2020 through fiscal year 2022 (see fig. 2). For example, one
	²¹ As authorized by the Fixing America's Surface Transportation Act, FRA, together with FTA, jointly administered the Positive Train Control Grant Program, which provided funding for the capital costs of installing PTC systems. Pub. L. No. 114-94, § 3028, 129 Stat. 1312, 1495-96 (2015). In some cases, where permitted by annual appropriations, FRA may also provide funding for PTC capital projects to commuter rail passenger transportation through the Consolidated Rail Infrastructure and Safety Improvements Program. 49 U.S.C. § 22907. FRA may also provide funding for PTC capital expenses to commuter rail passenger transportation under the Railroad Crossing Elimination Program. 49 U.S.C. § 22909. However, FRA is generally prohibited under 49 U.S.C. § 22905(f) from providing grant funding for commuter rail passenger transportation.
	²² Existing track signaling systems are those in which dispatchers in centralized offices issue train movement instructions that allow trains to enter specific track segments, or blocks. These instructions are communicated to train operators through signals alongside the track, or, in some cases, by verbal radio communication.

commuter rail agency said that it and other agencies on the Northeast Corridor, which runs between Boston and Washington, D.C., operate PTC as an overlay to the underlying wayside signaling systems, so costs are not separated.²³

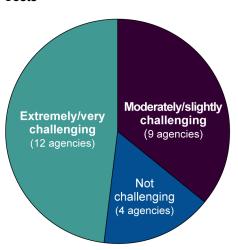

Figure 2: Degree to Which Having a Positive Train Control (PTC) Overlay System Design Makes It Challenging to Determine PTC Operations and Maintenance (O&M) Costs

Note: Two of the agencies that reported no challenge for estimating PTC costs operate the Interoperable Electronic Train Management System (I-ETMS), and two operate a mix of I-ETMS and Advanced Civil Speed Enforcement System II (ACSES II) PTC technology.

Host/Tenant Agreements and Contracts. Surveyed agencies told us that host and tenant agreements between railroads—in which the tenant may pay the host fees to access, dispatch, and maintain the track infrastructure—may not break out PTC-specific costs.²⁴

 For the 15 commuter rail agencies that host other railroads, all 15 said their agreements to host another railroad on their tracks did not specify PTC-specific O&M costs. About half (seven) of these host agencies said this made it extremely or very challenging to estimate

²³FRA certified these PTC systems to operate as an overlay to the underlying wayside signaling systems. The initial version of ACSES (ACSES I) alone does not meet all technical requirements for PTC systems; ACSES II includes the additional mandated functions for PTC, according to DOT.

²⁴Many railroads can be a host for some portion of track that they own and be a tenant on track that another railroad owns, so the total respondents in both the host and tenant contract questions are not mutually exclusive of one another and do not add up to the total number of survey respondents. All of the responding agencies were tenants in some capacity.

Source: GAO. | GAO-24-106329

PTC O&M costs for fiscal year 2020 through fiscal year 2022 (see fig.3).

 For the 26 commuter rail agencies that are tenants of another railroad, 12 said their agreement to be a tenant on another entity's tracks did not break out PTC costs specifically.²⁵ Seven of these 12 tenant agencies said this made it extremely or very challenging to estimate PTC O&M costs (see fig. 4).

Figure 3: Degree to Which Having a Host Agreement That Does Not Break Out Positive Train Control (PTC) Operations and Maintenance (O&M) Costs Makes It Challenging to Determine Those Costs

Source: GAO. | GAO-24-106329

²⁵An additional three agencies said their contract did break out PTC costs and another 11 did not answer the question. We did not ask the 11 agencies with no answer why they did not answer.

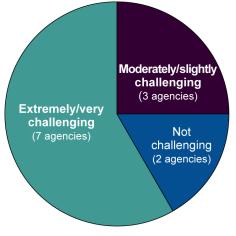

Figure 4: Degree to Which Having a Tenant Agreement That Does Not Break Out Positive Train Control (PTC) Operations and Maintenance (O&M) Costs Makes It Challenging to Determine Those Costs

In addition, 22 commuter rail agencies responding to our survey said that they have contracts for O&M services such as repairing broken equipment. Of these, just over half (13) said that their service contracts did not break out PTC-specific O&M costs. About half (seven) of the 13 said this made it extremely or very challenging to estimate PTC O&M costs for fiscal year 2020 through fiscal year 2022. Five agencies said it made it moderately challenging, and one agency said it was not a challenge to estimate PTC costs for the service that it directly runs and maintains because their accounting records tracked PTC costs separately (see fig. 5).

Source: GAO. | GAO-24-106329

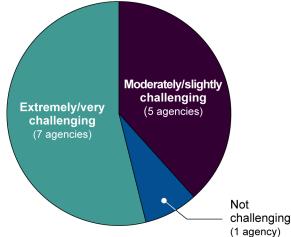

Figure 5: Degree to Which Having a Service Contract That Does Not Break Out Positive Train Control (PTC) Operations and Maintenance (O&M) Costs Makes It Challenging to Determine Those Costs

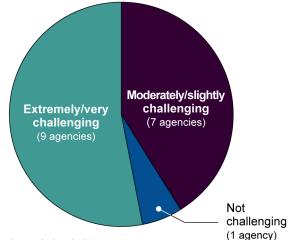

Labor Costs. Eighteen of the 26 commuter rail agencies responding to our survey said that they do not track some employees' PTC O&M-related tasks separately from their non-PTC O&M tasks.²⁶ Nine of these said this made it extremely or very challenging to estimate PTC O&M costs (see fig. 6).²⁷ One commuter rail agency said that officials would have to add new job codes that were specific to PTC to determine the amount of time spent on PTC-related tasks. However, officials at this agency said that they have found in the past that the more detailed job codes become, the less accurate their use tends to be.

Source: GAO. | GAO-24-106329

²⁶The other eight commuter rail agencies said their accounting systems have separate labor codes for PTC-related tasks.

²⁷The remaining agency did not answer the question.

Source: GAO. | GAO-24-106329

In addition to the three reasons listed above, a few agencies also said that PTC costs were still being funded through capital funds and are, therefore, not accounted for as O&M costs. For example, one agency said that its PTC system was in the project phase, and thus, costs associated with materials and supplies are under the primary contract within its capital budget for installing the technology.

Moreover, some commuter rail agencies said it can be challenging to project future PTC O&M costs. Eighteen of the 25 commuter rail agencies that answered our survey questions related to projecting costs said that having only one vendor for PTC components made projecting future PTC O&M costs extremely or very challenging (e.g., some PTC systems parts are manufactured by a single company), because the vendor could make unanticipated changes to prices in the future. Sixteen (of the 25 answering these questions) reported that the uncertain timing of software and hardware upgrades made projecting future costs extremely or very challenging. For example, one commuter rail agency said it is difficult to know when PTC software will become obsolete, which makes it challenging to project (and therefore budget for) the software's replacement or upgrade costs.

Despite These Challenges, Many Commuter Rail Agencies Were Able to Provide Estimates

Just over half of the 26 commuter rail agencies that responded to our survey were able to provide "complete" estimates of their PTC O&M costs for each fiscal year from fiscal years 2020 through 2025. We refer to estimates as "complete" when (1) the estimate was for a full fiscal year of costs and (2) the estimate included all cost categories or sufficient reasons as to why a category was not included (e.g., these costs were included in another category).

Agencies that were not able to provide complete estimates cited two reasons. First, in fiscal years 2020 and 2021, some agencies had not yet fully implemented PTC.²⁸ In these years, agencies might not have had PTC O&M costs or might have had some costs but only for part of the year. Second, some agencies provided full-year estimates for certain cost categories but not others.²⁹ For example, an agency might be able to estimate their contracts and agreements costs but not their PTC O&M material and supply costs.

Despite these challenges, we received full-year, complete estimates from 15 agencies for fiscal year 2020, 14 agencies for fiscal year 2021, and 17 agencies for fiscal years 2022-2025.³⁰ Fiscal year 2022 had the most complete estimates since some agencies had not yet fully implemented PTC in fiscal years 2020 and 2021. As a result, we focused our analysis on fiscal year 2022. We determined the data these 17 commuter rail agencies provided were sufficiently reliable for the purposes of describing them in this report.

Although many agencies reported it was challenging, they reported that they used a variety of approaches to generate estimates. For example, one agency estimated its fiscal years 2020-2022 material and supply costs by reviewing invoices for the costs of parts purchased to operate its PTC system. Another agency estimated its fiscal years 2020-2022 PTC O&M utility costs by holding discussions with its IT staff. A third agency said that it analyzed the past failure rate of PTC system parts and took

²⁸The final deadline to implement PTC was December 31, 2020, and many commuter rail agencies finished their implementation in the closing months and days of 2020. This time period fell during some agencies' fiscal year 2020 and other agencies' fiscal year 2021. Therefore, agencies' fiscal year 2022 was the first fiscal year in which all commuter rail agencies had PTC fully implemented.

²⁹There were instances in which an agency did not provide an actual cost or estimated cost for a category but had a complete estimate. Specifically, an agency might not have provided costs for a category because it had provided this cost within another category. For example, contracts and agreements sometimes included materials and supplies costs.

³⁰Some agencies provided estimated ranges rather than exact amounts, and we take this uncertainty into consideration when reporting summary statistics.

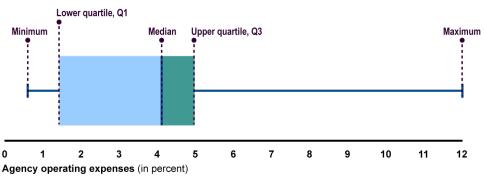

into account expected future obsolescence of parts to project material and supply costs for fiscal years 2023-2025.

Most Estimates Showed Agencies Spent a Small Portion of Their Total Operating Costs on PTC in Fiscal Year 2022, with Costs Increasing in Future Years

Most Agencies Reported PTC O&M Costs Less Than 5 Percent of Their Total Operating Costs in Fiscal Year 2022, and Costs Tended to Increase with Agency Size

Of the 17 agencies that were able to provide complete estimates for fiscal year 2022, a majority spent 5 percent or less of their total operating costs on PTC O&M. These 17 estimates ranged from less than 1 percent to 12 percent, with a median of about 4 percent (see fig. 7 for this distribution).³¹

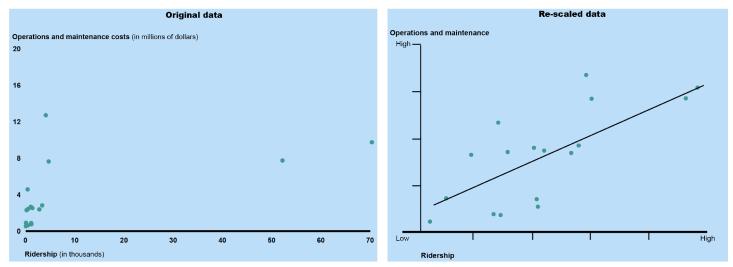

Source: GAO analysis of Federal Transit Administration and survey data. | GAO-24-106329

³¹Further, we determined that 19 agencies were able to self-report plausible estimates of the share of total operating costs that they spend on PTC to be less than 20 percent, with most being less than 5 percent.

In dollar terms, 13 of the 17 agency-provided estimates of total PTC O&M costs in fiscal year 2022 were for amounts less than \$5 million, and the median was about \$2.4 million (i.e., eight of the estimates were below \$2.4 million and eight were above it).

We analyzed two factors that can be proxies for railroad system size and found that they have discernible relationships with fiscal year 2022 PTC O&M costs: ridership and route miles in PTC operation. First, our analysis showed that higher ridership is strongly associated with higher PTC O&M costs. That is, as calendar year 2022 ridership increased, there was a strong tendency for fiscal year 2022 PTC O&M costs to increase. Specifically, we found a linear relationship between ridership and operations and maintenance costs after re-scaling each variable, as shown in the right panel of Figure 8.³² See appendix I for more detail on this re-scaling.

Figure 8: Relationship Between Fiscal Year 2022 Commuter Rail Positive Train Control Operations and Maintenance Cost Estimates and Calendar Year 2022 Ridership, for 17 Commuter Rail Agencies

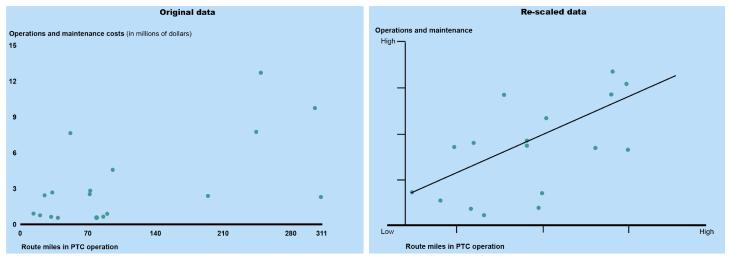

Source: GAO analysis of American Public Transportation Association and survey data. | GAO-24-106329

Note: In our sample of 17 agencies, PTC O&M cost tended to increase with ridership. To assess the strength of this relationship (shown on left), we re-scaled each variable to make the relationship linear (shown on right). The re-scaled variables help illustrate the tendency of costs to increase as ridership increased, as shown by the regression line.

³²We did not conduct analysis to determine the degree to which the relationship between measures of agency size and PTC O&M costs is causal due to the small number of respondents and the combination of actual costs and estimates.

Second, the number of a commuter rail agency's route miles in PTC operation is also moderately to strongly associated with PTC O&M costs (see fig. 9). That is, as route miles in PTC operation as of December 29, 2020 increased, there was a moderate to strong tendency for fiscal year 2022 PTC O&M costs to increase.³³

Figure 9: Relationship Between Fiscal Year 2022 Commuter Rail Positive Train Control (PTC) Operations and Maintenance Cost Estimates and Route Miles in PTC Operation as of December 29, 2020, for 17 Commuter Rail Agencies

Source: GAO analysis of Federal Railroad Administration and survey data. | GAO-24-106329

Although we found ridership and route miles to be positively associated with PTC O&M costs, the actual increase in costs associated with increased railroad system size was relatively small. Specifically, for every 10 percent increase in ridership, there was a 4 percent increase in cost, on average, and for every 10 percent increase in route miles in PTC operation, there was a 6 percent increase in cost, on average. Our survey data are non-generalizable because only a nonrandom subset of agencies provided complete estimates. We also cannot make conclusions about whether these system characteristics influenced PTC O&M costs, because we did not control for other factors that might affect costs such as PTC type.

³³We used route miles in PTC operation as of December 29, 2020 because that was the date of the data provided by DOT.

Most Agencies Projected Increases in PTC O&M Costs From Fiscal Year 2023 through 2025

Of the 26 agencies that responded to our survey, 17 provided complete projections of their annual PTC O&M costs from fiscal year 2023 through fiscal year 2025.³⁴ See Table 1 for a summary of agencies' fiscal years 2023–2025 annual projections.

Table 1: Positive Train Control Operations and Maintenance Cost Projections from 17 Commuter Rail Agencies, Fiscal Years 2023 –2025

Fiscal Year	Min	Мах	Median
2023	\$401,437	\$17,000,000	\$3,038,578
2024	\$452,041	\$21,500,000	\$4,542,939
2025	\$295,817	\$26,500,000	\$4,453,638

Source: GAO Analysis of Survey Data. | GAO-24-106329

Note: The three maximum values in this table are the midpoints of the following estimated cost ranges provided by three agencies responding to our survey: \$14,000,000 - \$20,000,000 (FY2023), \$18,000,000 - \$25,000,000 (FY2024), and \$23,000,000 - \$30,000,000 (FY2025).

The majority of these agencies (15) projected that their PTC O&M costs would increase over the 3 fiscal years.³⁵ The remaining two agencies projected that their costs would decrease over this time frame. The amount of the projected increases from fiscal year 2023 through fiscal year 2025 varied across agencies, ranging from an increase of 0.9 percent to an increase of 112 percent with a median of about 14 percent. The two agencies expecting cost decreases projected their costs would decline by 0.9 percent and about 26 percent, respectively. Officials from one of these agencies said that the decrease was due to planned position reductions now that PTC was past implementation. Officials from the other agency said the decline was driven by replacing a high-cost item in their materials and supplies in 2023 and 2024, and then not having that cost in 2025.

Agencies responding to our survey reported using different approaches to generate projected PTC O&M costs for fiscal years 2023–2025. For example, several agencies stated that they had contracts that specified the cost increases from year to year. In other cases, agencies told us that they had analyzed historical data on various types of PTC O&M costs to project what those costs might be in the future.

³⁴Sixteen of the 17 agencies with complete projections of their annual PTC O&M costs for fiscal year 2023 through fiscal year 2025 were the same as the agencies that submitted complete estimates of their annual PTC O&M costs in fiscal year 2022.

³⁵We did not look at what factors (e.g. ridership or route miles as noted above) were associated with larger increases in projections because projections are generally less reliable than past-year estimates.

Agency Comments	We provided a draft of this report to the Department of Transportation for review and comment. DOT provided technical comments, which we incorporated, as appropriate.
	We are sending copies of this report to the appropriate congressional committees, the Secretary of Transportation, and other interested parties. In addition, the report is available at no charge on the GAO website at https://www.gao.gov. If you and your staff have any questions about this report, please contact me at (202) 512-2834 or repkoe@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made key contributions to this report are listed in appendix III.

Appendix I: Objectives, Scope and Methodology

This report examines (1) challenges, if any, that commuter rail agencies reported facing in determining their annual positive train control (PTC) operations and maintenance (O&M) costs from fiscal year 2020 through fiscal year 2025, and the extent to which they were able to estimate these costs, and (2) the annual PTC O&M costs from fiscal years 2020 through fiscal year 2025 estimated by commuter rail agencies. We limited the scope of our review to the 29 public commuter rail agencies in the U.S. required by federal law to implement PTC.¹

To learn about any challenges the agencies face in producing estimates, as well as collect these commuter rail agencies' PTC O&M cost estimates, we conducted a web-based survey of the 29 agencies from May 10, 2023 through June 21, 2023. Twenty-six agencies completed the online questionnaire. The 29 agencies who received the questionnaire are listed in Table 1.

¹Rail Safety Improvement Act of 2008, Pub. L. No. 110-432, § 104(a), 122 Stat. 4848, 4856-57 (2008) (codified as amended at 49 U.S.C. § 20157). We define commuter rail agencies as public agencies with passenger rail service between an urban area and the surrounding suburban communities. Intercity passenger rail such as Amtrak and Brightline are excluded from this review as they are operated as for-profit companies, rather than as public authorities. The WeGo Star, previously the Music City Star, a commuter rail service running between Nashville and Lebanon, Tennessee, is also excluded because it was exempted from the requirement to install PTC.

Note: The three primary PTC system types are (1) Interoperable Electronic Train Management System (I-ETMS), (2) Advanced Civil Speed Enforcement System II (ACSES II), or (3) Enhanced Automatic Train Control (E-ATC).

Before drafting our survey, we held a discussion group with representatives of eight commuter rail agencies to help us understand the types of PTC O&M costs and how these costs may be categorized for a systematic data collection effort. We selected the discussion group participants to reflect a range of commuter rail system size (based on ridership) and type of PTC system. Based on this discussion group, our review of the National Transit Database's (NTD) cost categorization system, and consultation with Federal Transit Administration (FTA) officials, we developed a list of PTC O&M cost categories. Our survey collected PTC O&M cost information for five cost categories:²

- 1. **Materials and Supplies**. The portion of non-capital material and supply costs, such as hardware, software, and other equipment attributable to operating and maintaining PTC.
- 2. **Contracts and Agreements.** If an agency contracts with other companies or railroads for maintenance, technical support, or back office, the portion of those contract costs attributable to operating and maintaining PTC.
- 3. **In-House Labor.** The fully burdened cost of in-house labor hours spent operating and maintaining PTC for both dedicated and partially dedicated PTC staff.
- 4. **Utilities:** Portion of utilities directly attributable to PTC, such as for cell service or fiber networks needed to operate PTC.
- Miscellaneous: Portion of quantifiable non-capital costs not covered under Materials/Supplies, Contracts, Utilities, or In-House Labor that are directly attributable to operating and maintaining PTC.³

To minimize errors arising from differences in how questions might be interpreted and to reduce variability in responses due to misinterpretation, we conducted pretests with officials from five commuter rail agencies. We selected the pretest participants to reflect a range of commuter rail system sizes, and to include commuter rail agencies that do and do not

²Our full survey can be found in appendix II.

³Although our survey collected information for 5 cost categories, we are only reporting estimated total costs, as agencies did not consistently report costs at the category level.

contract out their PTC operations and maintenance. We revised our survey based on feedback we obtained during these discussions.

To reduce nonresponse bias, we followed up by phone and/or e-mail with commuter rail agencies who had not responded to the survey to encourage them to complete it. After closing the web survey, we reviewed the 26 completed questionnaires to check for data entry errors, missing values, and unclear responses. Based on this review, we conducted further follow-up with respondents to clarify their responses and increase the quality of the survey data. Based on our analysis of the submitted cost data, we determined that we received full-year, complete estimates from 15 agencies for fiscal year 2020, 14 agencies for fiscal year 2021, and 17 agencies for fiscal years 2022–2025. We determined this by ensuring that the estimates provided were (1) for a full fiscal year of costs and (2) included all cost categories or sufficient reasons as to why a category was not included (e.g., these costs were included in another category).⁴

Our survey contained a mixture of open- and closed-ended questions. The survey design ensured agencies only responded to questions applicable to their situations. As a result, the number of responses for each question varied; we accounted for this in our analysis of the survey responses. We conducted quantitative analysis of the cost data provided and developed descriptive statistics for the ranges of costs in total. We compared the costs to the size of the agency using ridership and route miles in PTC operation as proxies, and to its total O&M costs as reported in the NTD. The distributions of fiscal year 2022 costs, calendar year 2022 ridership, and route miles in PTC operation as of 2020 were heavily skewed due to several extreme outliers representing large commuter rail systems. To account for these outliers in our analysis, we rescaled each variable by applying natural log transformations to the variables to make the relationship linear before calculating Pearson correlation and ordinary least squares regression coefficients. The re-scaled variables help illustrate the tendency of costs to increase as ridership or route miles in PTC operation increased.

We conducted a content analysis of the survey responses to selected open-ended questions, and we reviewed the responses to the other openended questions to identify illustrative examples. To conduct the content analysis, one analyst reviewed the responses and categorized them, and a second analyst reviewed these categorizations. When the second

⁴There were instances in which an agency did not provide an actual cost or estimated cost for a category but had a complete estimate. Specifically, an agency might not have provided costs for a category because it had provided this cost within another category. For example, contracts and agreements sometimes included materials and supplies costs.

analyst disagreed with the first analyst's categorization, the two analysts discussed the discrepancy and resolved it.

To obtain general information on commuter railroads, PTC, and PTC O&M costs, we reviewed previous GAO reports. We also reviewed applicable statutes and regulations to identify any O&M funding available to commuter railroads for operating and maintaining PTC; any data collection and reporting requirements related to PTC; and the Federal Railroad Administration's (FRA) and FTA's roles in data collection and reporting of PTC costs. Further, we conducted an analysis of commuter rail agencies' public financial documents to determine if any commuter rail agencies publicly reported PTC O&M costs. Finally, we searched publication databases for relevant literature.

To gather general information about operating and maintaining PTC systems—and the associated costs—we interviewed Department of Transportation (DOT) officials from FRA and FTA, five selected commuter rail agencies, a private company that provides PTC services to commuter rail agencies, and other stakeholders such as the American Public Transportation Association and the Commuter Rail Coalition. We selected these five commuter rail agencies to obtain a mixture of geographic location, agency size, and type of PTC system used. We also considered the recommendations of stakeholders when selecting these agencies for interviews.

We conducted this performance audit from October 2022 to January 2024 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Appendix III: GAO Contact and Staff Acknowledgments

GAO Contact	Elizabeth Repko, (202) 512-2834 or repkoe@gao.gov
Staff Acknowledgments	In addition to the contact named above, Sarah Farkas (Assistant Director), Sarah Jones (Analyst-in-Charge), Ned Malone (Senior Analyst), Madeline Barch, Melanie Diemel, Richard Jorgenson, Rebecca Morrow, Bryan Prince, Carl Ramirez, Jason Rodriguez, Michelle Weathers, Elizabeth Wood, and Matthew Zaun made key contributions to this report.

GAO's Mission	The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.
Obtaining Copies of GAO Reports and Testimony	The fastest and easiest way to obtain copies of GAO documents at no cost is through our website. Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. You can also subscribe to GAO's email updates to receive notification of newly posted products.
Order by Phone	The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, https://www.gao.gov/ordering.htm.
	Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.
	Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.
Connect with GAO	Connect with GAO on Facebook, Flickr, Twitter, and YouTube. Subscribe to our RSS Feeds or Email Updates. Listen to our Podcasts. Visit GAO on the web at https://www.gao.gov.
