THE NATION'S GROWING Fiscal Imbalance: Perspectives and issues

The Honorable David M. Walker Comptroller General of the United States

Market News International New York, NY May 18, 2005

GAO's Strategic Plan

Serving the Congress and the Nation GAO's Strategic Plan Framework

MISSION

GAO exists to support the Congress in meeting its constitutional responsibilities and to help improve the performance and ensure the accountability of the federal government for the benefit of the American people.

FAA Air Traffic Control Modernization	1995
^a Legislation is likely to be necessary, as a supplement to actions by the executive branch, in order to effect	ively address this

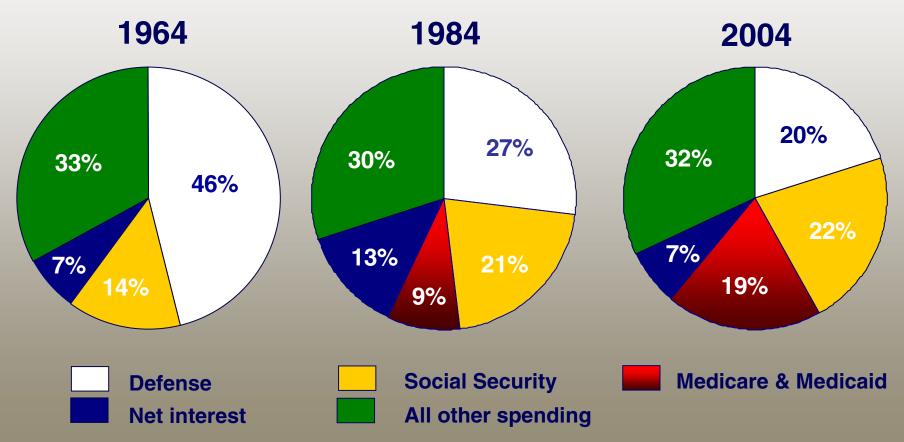

High-Risk Areas

high-risk area.

^bTwo high-risk areas—Collection of Unpaid Taxes and Earned Income Credit Noncompliance—have been consolidated to make this area.

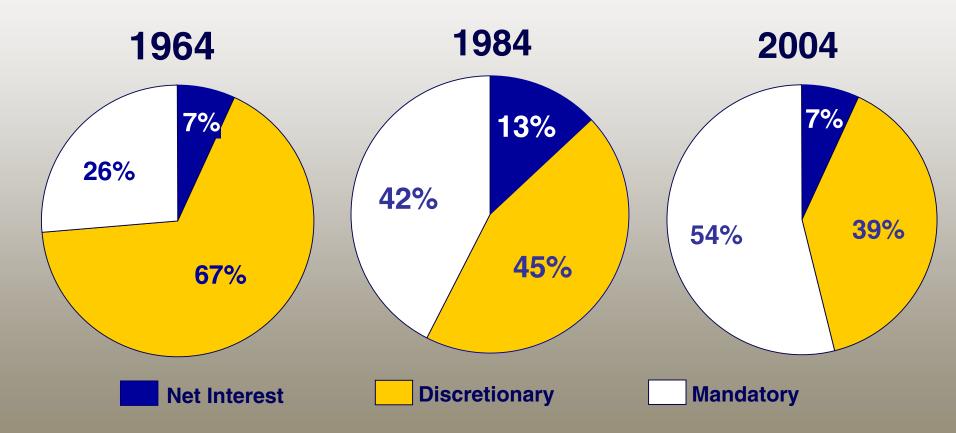

^cThe IRS Financial Management high-risk area has been incorporated into this high-risk area.

Composition of Federal Spending

Source: Office of Management and Budget.

Federal Spending for Mandatory and Discretionary Programs

Source: Office of Management and Budget.

Fiscal Year 2004 Deficit Numbers

	\$ Billion	% of GDP
On-Budget Deficit	(567)	(4.9)
Off-Budget Surplus	155*	1.3
Unified Deficit	(412)	(3.6)

*Includes the \$151 billion Social Security surplus and a \$4 billion surplus for the Postal Service March 2005

Surplus or Deficit as a Share of GDP

Fiscal Years 1962-2004

3 Percent of GDP

Source: Office of Management and Budget and Congressional Budget Office.

Selected Fiscal Exposures: Sources and Examples 2005^a

Туре	Example (dollars in billions)
Explicit liabilities	Publicly held debt (\$4,297) Military and civilian pension and post-retirement health (\$3,059) Veterans benefits payable (\$925) Environmental and disposal liabilities (\$249) Loan guarantees (\$43)
Explicit financial commitments	Undelivered orders (\$596) Long-term leases (\$39)
Financial contingencies	Unadjudicated claims (\$4) Pension Benefit Guaranty Corporation (\$96) Other national insurance programs (\$1) Government corporations e.g., Ginnie Mae
Exposures implied by current policies or the public's expectations about the role of government	Debt held by government accounts (\$3,071) ^b Future Social Security benefit payments (\$4,017) ^c Future Medicare Part A benefit payments (\$8,561) ^c Future Medicare Part B benefit payments (\$12,384) ^c Future Medicare Part D benefit payments (\$8,686) ^c Life cycle cost including deferred and future maintenance and operating costs (amount unknown) Government Sponsored Enterprises e.g., Fannie Mae and Freddie Mac

^a All figures are for end of fiscal year 2004, except Social Security and Medicare estimates, which are as of January 1, 2005. ^b This amount includes \$845 billion held by military and civilian pension and post-retirement health funds that would offset the explicit liabilities reported by those funds.

^c Figures for Social Security and Medicare are net of debt held by the trust funds (\$1,687 billion for Social Security, \$268 billion for Medicare Part A, and \$19 billion for Medicare Part B) and represent net present value estimates over a 75-year period. Over an infinite horizon, the estimate for Social Security would be \$11.1 trillion, \$24.1 trillion for Medicare Part A, \$25.8 trillion for Medicare Part B, and \$18.2 trillion for Medicare Part D. Source: GAO analysis of data from the Department of the Treasury, the Office of the Chief Actuary, Social Security Administration, and the Office of the Actuary, Centers for Medicare and Medicaid Services. Revised 3/29/05

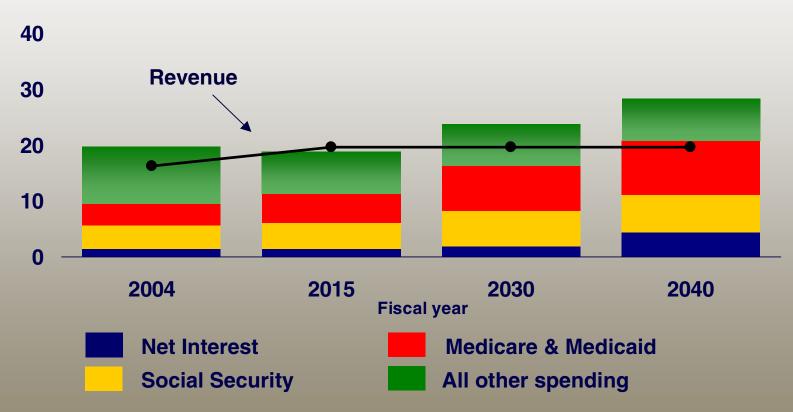

Another Way to Think About These Numbers

- Debt held by the public—\$4.3T
- Trust fund debt—\$3.1T
- Gross debt—\$7.4T
- Gross debt per person—about \$25,000
- If we add everything on the previous slide, the burden is more than \$150,000 per person or more than \$365,000 per full-time worker. Alternatively, it amounts to a total burden of more than \$45 trillion in current dollars, which is about 18 times the current annual federal budget or about 3.7 times the current annual GDP. This compares with an estimated \$48.5 trillion in total net worth, including home equity, for all Americans.

Note: The calculations are based on 75-year projections for Social Security and Medicare.

Composition of Spending as a Share of GDP Under Baseline Extended

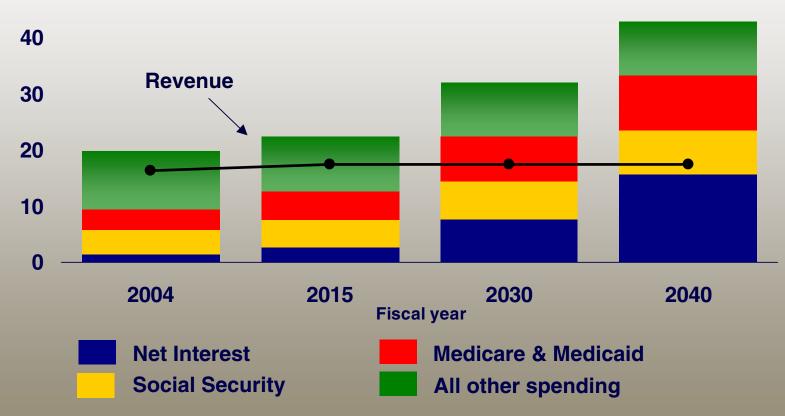

Notes: In addition to the expiration of tax cuts, revenue as a share of GDP increases through 2015 due to (1) real bracket creep, (2) more taxpayers becoming subject to the AMT, and (3) increased revenue from taxdeferred retirement accounts. After 2015, revenue as a share of GDP is held constant.

Source: GAO's March 2005 analysis.

Composition of Spending as a Share of GDP

Assuming Discretionary Spending Grows with GDP after 2005 and All Expiring Tax Provisions are Extended

50 Percent of GDP

Notes: Although expiring tax provisions are extended, revenue as a share of GDP increases through 2015 due to (1) real bracket creep, (2) more taxpayers becoming subject to the AMT, and (3) increased revenue from tax-deferred retirement accounts. After 2015, revenue as a share of GDP is held constant.

Source: GAO's March 2005 analysis.

Current Fiscal Policy Is Unsustainable

• The "Status Quo" is Not an Option

- We face large and growing structural deficits largely due to known demographic trends and rising health care costs.
- GAO's simulations show that balancing the budget in 2040 could require actions as large as
 - Cutting total federal spending as much as 60 percent or
 - Raising taxes up to 2.5 times today's level
- Faster Economic Growth Can Help, but It Cannot Solve the Problem
 - Closing the current long-term fiscal gap based on responsible assumptions would require real average annual economic growth in the double digit range every year for the next 75 years.
 - During the 1990s, the economy grew at an average 3.2 percent per year.
 - As a result, we cannot simply grow our way out of this problem. Tough choices will be required.

• The Sooner We Get Started, the Better

- Less change would be needed, and there would be more time to make adjustments.
- The miracle of compounding would work with us rather than against us.
- Our demographic changes will serve to make reform more difficult over time.

The Way Forward

- Implement new accounting and reporting approaches and new budget control mechanisms for considering the impact of spending and tax policies and decisions over the long term
- Develop new metrics for measuring the impact of policies and decisions over the long term (e.g., key national indicators to measure our Nation's position and progress over time and in relation to other countries)
- Reexamine the base—question existing programs, policies and activities

Long-term Fiscal Challenges Demand New Metrics, Mechanisms, and Processes

- Accounting and reporting policies for trust funds, Social Security, Medicare, Veterans benefits, among other things, need to be reviewed and revised (e.g., possible fiscal burden statement with per capita and intergenerational figures)
- The current budget time horizon [2-year, 5-year, 10-year] does not capture many long-term costs—e.g. Social Security, Medicare, pension insurance—and other major tax and spending provisions
- Cash and obligations-based budgeting is misleading for insurance and some benefit programs
- Budget controls have expired—and we need to go beyond "holding the line" to "changing the base" in spending and tax policies

Improved Metrics, Measures and Processes: Some Ideas

- Provide information on long-term costs of major spending and tax proposals before they are voted on, including showing long-term costs even for proposals that sunset
- Establish an OMB annual report on fiscal exposures, including appropriate measures and how to address them
- Consider fiscal targets, triggers, sunset provisions and points of order with focus on limiting growth of longterm commitments
- Move to accrual budgeting for employee pension, retiree health; disclose "risk assumed" [missing premium] for insurance
- Reinstitute budget controls (caps & PAYGO)

We Need a Multifaceted Approach to Close the Long-Term Fiscal Gap

Policy:

- Restructure existing entitlement programs
- Reexamine the base of discretionary and other spending
- Review and revise our tax policy and enforcement programs

Operations:

- Reassess and revise how the government does business (e.g., management, planning and operational issues)
- Consider who should provide government services (e.g., sourcing strategy)

21st Century Challenges Report

- Report was issued February 16
- Based on GAO's work for the Congress
- Provides framework and questions to assist in reexamining the base
- Covers entitlements & other mandatory spending, discretionary spending, and tax policy and programs

Generic Reexamination Criteria and Sample Questions

Relevance of purpose and the federal role

Why did the federal government initiate this program and what was the government trying to accomplish?

Have there been significant changes in the country or the world that relate to the reason for initiating it?

Measuring success

Are there outcome-based measures? If not, why?

If there are outcome-based measures, how successful is it based on these measures?

Targeting benefits

Is it well targeted to those with the greatest needs and the least capacity to meet those needs?

Affordability and cost effectiveness

Is it using the most cost-effective or net beneficial approaches when compared to other tools and program designs?

Best practices

Is the responsible entity employing prevailing best practices to discharge its responsibilities and achieve its mission?

Twelve Reexamination Areas

MISSION AREAS

- Defense
- Education & Employment
- Financial Regulation & Housing
- Health Care
- Homeland Security

- International Affairs
- Natural Resources, Energy & Environment
- Retirement & Disability
- Science & Technology
- Transportation

CROSSCUTTING AREAS

Improving Governance

• Reexamining the Tax System

Themes

- Changing Security Threats
- Increasing Global Interdependence
- Demographic Shifts—Aging Population
- Promoting Growth in a Knowledge-Based Economy
- Governance

- How should the historical allocation of resources across services and programs be changed to reflect the results of a forward-looking comprehensive threat/risk assessment as part of DOD's capabilities-based approach to determining defense needs?
- Should federally funded training programs operated across multiple federal agencies—9 federal agencies administer 44 such programs—be better integrated and restructured in order to increase their cost effectiveness?
- To what extent do the tools and incentives increase spending on housing rather than promote affordable housing? Can the tools and incentives provided to homeownership be better targeted toward increasing home ownership among selected groups with less capacity to access credit markets?

- How can industry standards for acceptable care be established and payment reforms be designed to bring about reductions in unwarranted medical practice variation? For example, what can or should the federal government do to promote uniform standards of practice for selected procedures and illnesses?
- What criteria should be used to target federal funding for homeland security in order to maximize results and mitigate risk within available resource levels?
- Do we need to reexamine the U.S. force structure used for nation building and peacekeeping activities by the United Nations, NATO, and other international institutions? Should the United States have a separate force devoted to such functions? What role should the United Nations, NATO, and other international institutions perform in connection with such functions?

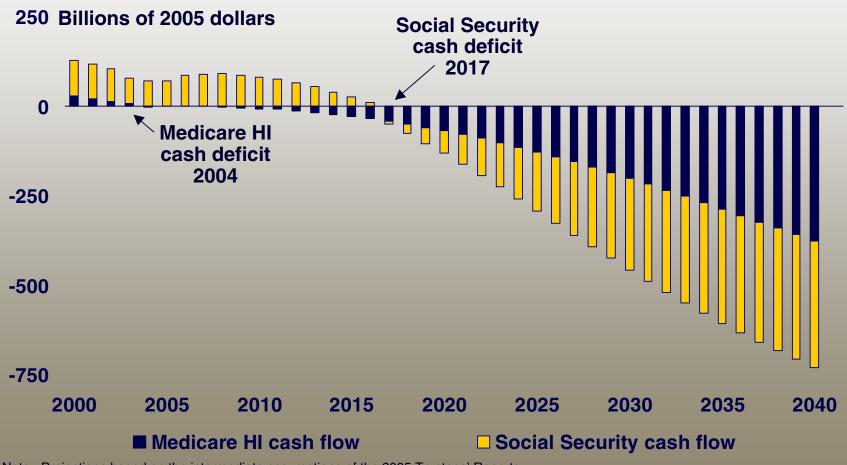

- To what extent are federal energy policies and incentive structures adequately preparing the nation to satisfy its energy needs over the long term? What is the appropriate balance between efforts to promote enhanced production of fossil fuels, alternative renewable energy sources, and energy conservation?
- How can federal disability programs, and their eligibility criteria, be brought into line with the current state of science, medicine, technology, and labor market conditions?
- How can the United States better develop a world-class technical and scientific domestic workforce that is not as dependent on large inflows of international students and researchers?

- Can intermodal solutions to the needs of modes such as freight, air, and passenger rail service be effectively carried out within the framework of the existing trust funds and other transportation programs or is another model needed?
- Which tax incentives need to be reconsidered because they fail to achieve the objectives intended by the Congress, their costs outweigh their benefits, they duplicate other programs, or other more cost-effective means exist for achieving their objectives?
- How should the federal government update its compensation systems to be more market-based and performance oriented?
- Is the federal government effectively informed by a key national indicator system about the position and progress of the nation as a whole—both on an absolute and relative bases compared to other nations—as a guide to helping set agency and program goals and priorities?

Key National Indicators

- WHAT: A portfolio of economic, social, environmental and security related outcome-based statistics that could be used to help assess the nation's and other governmental jurisdictions' position and progress
- WHO: Many countries and several states and localities have already undertaken related initiatives (e.g., Australia, New Zealand, Canada, United Kingdom, Oregon, Washington, and Charlotte)
- WHY: Development of such a portfolio of indicators could have a number of possible benefits, including
 - Serving as a framework for related strategic planning efforts
 - Enhancing performance and accountability reporting
 - Informing public policy decisions, including much needed baseline reviews of existing government policies, programs, functions, and activities
 - Facilitating public education and debate as well as an informed electorate
- WAY FORWARD: Consortium of key players led by the National Academies domestically and related OECD efforts internationally

Social Security and Medicare's Hospital Insurance Trust Funds Face Cash Deficits

Note: Projections based on the intermediate assumptions of the 2005 Trustees' Reports. Source: GAO analysis based on data from the Office of the Chief Actuary, Social Security Administration and Office of the Actuary, Centers for Medicare and Medicaid Services.

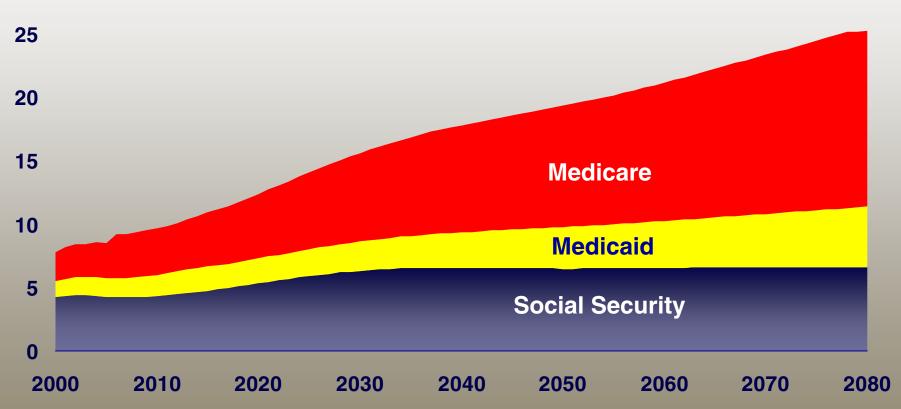

Key Dates Highlight Long Term Challenges of the Social Security System

Date	Event
2009	Social Security cash surplus begins to decline
2017	Annual benefit costs exceed cash revenue from taxes
2027	Trust fund ceases to grow because even taxes plus interest fall short of benefits
2041 (SSA) 2052 (CBO)	Trust fund exhausted, annual revenues sufficient to pay about 74% – 78% of promised benefits

GAO Criteria for Evaluating Social Security Reform Proposals

Reform proposals should be evaluated as packages that strike a balance among individual reform elements and important interactive effects.

Comprehensive proposals can be evaluated against three basic criteria:

- Financing sustainable solvency
- Balancing adequacy and equity in the benefits structure
- Implementing and administering reforms

Evaluating Health Care System Reforms

- Cost, access, and quality challenges—together with obstacles to achieving efficiency—argue for fundamental system reform.
- A comprehensive review and reassessment of the overall health care system raises the following questions:
 - What are societal needs versus individual wants in our health care system?
 - Who among individuals, employers, and governments—should be responsible for paying for health care?
 - Where would we get the largest return for our efforts to control spending?
 - **How** much of health care costs can government, employers, and individuals afford and sustain over time?
 - When are we going to get started, as the challenge gets bigger everyday and any delay compounds the problems?

Health Care System Elements: Incentives, Transparency, and Accountability

• Ideally, health care system reforms will

- align <u>incentives</u> for providers and consumers to make prudent choices about health insurance coverages and prudent decisions about the use of medical services,
- foster <u>transparency</u> with respect to the value and costs of care, and
- ensure <u>accountability</u> from health plans and providers to meet standards for appropriate use and quality.
